Mahler OT Request 02-29-2016.pdf

Oops, I actually filled one out but forgot to attach.

Subject: OT Request for this week

There are several lingering parts of the surface fire removal. I am going to need to review comments from MDNR on the Storm Water proposal the WL respondents provided last week. Additionally, I need to review the latest version of the NCC workplan to see if EPA last set of comments were addressed. MDNR tells me that MDHSS plans to provide comments related specifically to the Sampling and Analysis plan for the NCC work. I will need to review those as well.

On the IB work, Paul R. tells me that I should expect the next iteration of the IB risk calculations by today or tomorrow. I will need to review this document and send to MDNR as soon as possible.

Finally in regards to the MDNRs vicinity sampling final report, according to the state they will likely share this document with us at some point this week. I will need to review that as well. I specifically will be evaluating whether the AAA trailer services investigation and proposed sediment sampling event will adequately address what MDNR asserts as areas needing additional investigation in their final report.

For all these things, I am requesting some OT for this week.

I will be finding out soon whether the investigation at AAA Trailer services will be happening this Saturday or earlier. Paul R. mentioned that AAA didn't mind the investigation happening earlier in the week. If it does get planned for Saturday, I will likely put in a TA to be on-site during this investigation.

Tom
